We've already seen that the computer architecture course consists of two components – the instruction set architecture and the computer organization itself. The ISA specifies what the processor is capable of doing and the ISA, how it gets accomplished. So the instruction set architecture is basically the interface between your hardware and the software. The only way that you can interact ...

"Computer architecture was being taught in a very descriptive fashion, almost if you were walking through a museum like El Prado and looking at two different paintings and trying to compare them," he said. "We weren't happy with that approach. We wanted something that was based on important measures like performance and cost. We began to write our book based on those things so that the ...
